

Pregnancy features

Version: 2.00 | Last Modified on 12/08/2025 2:08 pm AEST

Record, update and close off a pregnancy. You can also run Antenatal and Summary reports and view all clinical notes recorded for a pregnancy in Summary Views.

Pregnancy module

This section explains how to record a new pregnancy or update an existing one. You can also use the buttons along the bottom of the pregnancy screen to perform the functions explained below.

- **Add Previous** is used to add a previous pregnancy to the patient's record.
- **Delete Pregnancy** deletes the pregnancy you're viewing and related antenatal records. To delete a finished pregnancy, use the **Re-Open Pregnancy** option first. The calculated Gravida, Para, TOP and MIS values do not include deleted pregnancies.
- **Antenatal Report** and **Summary Report** can be selected to generate reports from the recorded data.

Note: When a pregnancy is recorded, a pop-up with the number of weeks will appear when the patient is opened in the clinical.

To record or update a pregnancy:

1. Start an encounter with the patient.

The **Current Encounter** section will open and display the clinical modules - including Pregnancy.

For the Pregnancy module to appear, the patient's gender must be set to female in the patient record.

2. Select **Pregnancy** from the **Current Encounter** menu.

If there is a **Current Pregnancy**, the module will open.

If there is no current pregnancy, a **New Pregnancy** button will display.

3. Fill in or update the appropriate fields.
 - **Gestational Age By LMP** is selected and filled in when recording a new pregnancy.
 - **Gestational Age By Scan** is selected and filled in when updating a pregnancy.
 - Use the **Antenatal Record** section's **Add** button to record antenatal information each time the patient visits.
 - **Pregnancy Outcome** and **Finish Date** are filled in when finishing a pregnancy.
 - **Gravida** - total number of times a woman has been pregnant, regardless of the outcome (including current pregnancies).
 - **Para** - number of births after 20 weeks (to describe a woman's obstetric history).

- **Mis** - number of miscarriages.
 - **TOP** - number for Termination of Pregnancy.
4. Select **Close** to save and exit.

Once the pregnancy is over, update the record:

1. In the **Pregnancy Outcome** field, select how the baby was delivered.
2. In the Finish Date fields, select the date of the pregnancy outcome.
3. Select **Finish Pregnancy**.

The **Pregnancy** screen will close, and the patient will no longer be recorded as pregnant in Zedmed.

Pregnancy Summary Views

Summary Views can be accessed while in any clinical module. When a patient is opened in clinical, it is displayed on the lower left. You do not need to start an encounter.

View an antenatal record

Right-click a record date and select **View Antenatal Record** to open that record (screenshot below).

Filter the History View for pregnancy information

Right-clicking a pregnancy (e.g. Pregnancy 1) and selecting Filter History by these Encounter Segments will filter the History View to only show the clinical encounters recorded for that pregnancy.

The screenshot shows the Zedmed Clinical interface. On the left is a 'Summary Views' sidebar with a list of categories: Problems, Referrals, Results, Immunisations, Allergies, Images/ECG, **Pregnancies** (highlighted with a red box), Documents, Attachments, Measurements, Medications, and Incoming Documents. Below this is a 'Reference View' section showing 'Allergies: No Known Alle' and 'Warnings:'. The main area displays a table of pregnancy data:

	Date	Weight	Systolic	Diast...	Oede...
Pregnancy 1					
	14/10/2024	64	120	80	
	15/07/2024	60	110	70	18

An 'Antenatal Record' window is open, showing a form for the date 14/10/2024. The form includes fields for Blood Pressure (120 / 80), Weight (64), Oedema, Fundal Height (26 cm), Urine, Size Calc (wks) (47), Size Clin (wks), Foetal Heart, and Presentation. A 'Comments' section contains the text 'Test entry'. A 'Close' button with a green checkmark is at the bottom right of the window.

Pregnancy Report

The pregnancy report lists all patients with recorded pregnancies in Zedmed. It is useful for monitoring patients who require follow-ups or may be overdue for a visit.

To open the Pregnancy report:

1. Open Zedmed Clinical.
2. Select **Reports** from the top menu.
3. Select **Pregnancy Report**.

Currently Pregnant Patients				
Patient Name	Date Due	Patient Age	Gestational Age	Last Visit
Bates, Bridgid	01/09/2024	34	58 weeks 2 days
