

ACIR Immunisation defaults

Last Modified on 10/02/2025 2:58 pm AEDT

The ACIR Immunisation defaults tab allows the users to select specific default vaccines and routes for particular ACIR individual and combination immunisations. These vaccines then default when the user brings up the childhood schedule for these immunisations.

To set defaults:

1. Select **Tools** from the top menu.
2. Select **Global Options**.
3. Select **ACIR Immunisation Defaults**.
4. Use the Product field next to each Vaccine row to select the default drug.
5. Use the Route field next to each Vaccine row to select the default route.
6. Select Close to save and exit.

Global Options								
General	Communications	Letters & Templates	Scanning	Results	Drugs	ACIR Immunisation Defaults	Chronic Disease Management	Library
Simple Vaccinations								
Vaccine	Product	Route						
13vPCV	Prevenar 7	▼
