

Set up electronic signatures

Last Modified on 13/09/2024 11:30 am AEST

Electronic signatures can be added to letters and referrals by applying the 'signature image' merge field. Simply save the practitioner's signature as an image file and upload it to their profile.

Electronic signatures are required for practitioners using **Secure Send** for pathology and radiology referrals.

The feature is available in Zedmed v36.5 and later.

How to create an electronic signature

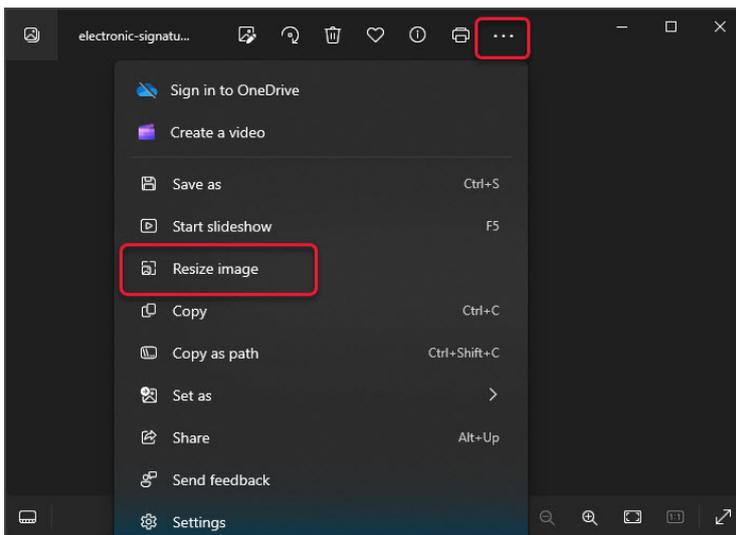

An electronic signature is an image file that contains the practitioner's signature. This can be made by signing a piece of paper and scanning it or using an electronic pen or touch screen device to save the signature as a file.

- The file should have a white or transparent background.
- The file should be no larger than 300px by 100px.
- The file must be saved as a JPEG.

For MacOS, set the signature file size using an image editing tool like **Image Resizer**.

For Windows, set the signature file size using the image viewer:

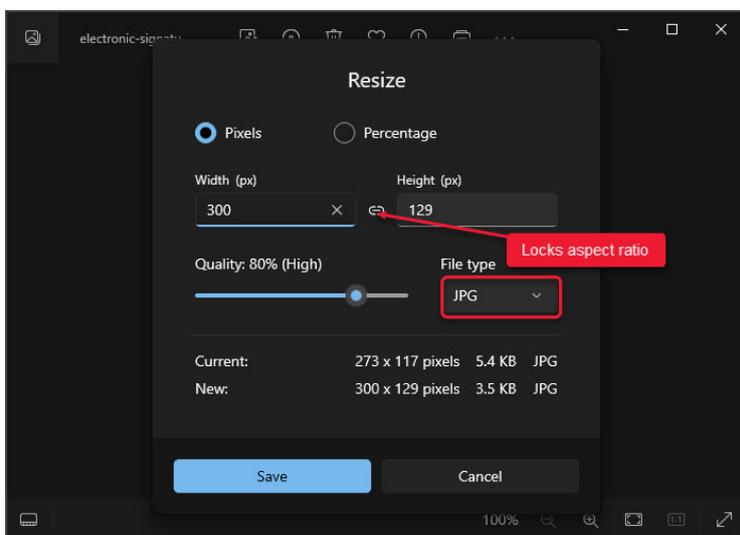

1. If you open the image in Windows, the image viewer has a resize option.
2. Select the three dots to open the menu.
3. Select **Resize image** from the menu.

The **Resize** screen will open and show the current size

4. Change the width to 300px or the height to 100px.
 - You only need to set the width or height.
 - The app will automatically adjust the other dimension and maintain the aspect ratio so the signature does not distort.

- You will not get 300px x 100px exactly. For example, if you select width 300px, the proportional height may be 91px.
5. Check the file type is JPG.

6. Select **Save**.

How to add a signature to a practitioner

To add an electronic signature:

1. Go to Zedmed's **Management** tab.
2. Select **Practice Setup > Doctors > Find Treating Doctors**.

The **Find Doctor Details** screen will open.

3. Find and open the doctor.

The **Doctor Details** screen will open.

4. Select **Signature Image**.

The **Signature Image** dialog will open.

5. Select **Load Images**.
6. Browse to the image file containing the practitioner's signature, and double-click it.

The signature will preview in the **Signature Image** dialog.

For Zedmed Cloud: Upload the file to the Temporary Files folder first, then browse to Temporary Files.

7. Select **Close** to save.
8. Select **Close** on the **Doctor Details** screen.

The electronic signature will be added to supporting letters and referrals.

The screenshot shows a 'Doctor Details' form with the following sections and fields:

- Identity:** Family Name (Davis), Given Names (Phillip), Title (Dr), EHealthID (HPI-I) (8003 6199 0002 6805), ABN/Bus. Name, AHPRA Number.
- Practice:** Dr Code (PD), Default Item #, Fee type override, Dr Type, Branches (Branch 1), Bank List (Albert Road MC Bank Account), MA Format (General Practitioner).
- Home Address:** Home Address, Suburb.
- Phone Numbers:** Home Phone, Home Fax, Mobile Phone.
- Clinical Settings:** Qualification (RACGP), Prescriber No (9877773), Email Address.
- Online Appointment System:** Practitioner ID, Biographic Information, Generate.
- Status:** Available (checked), Assist Only, External Primary Surgeon Only, Available Online.
- Other Provider #:** Other Provider #, Inavailable, Delete, Invoice Header, Invoice Footer, Another.
- Signature Image:** A dialog box with a blurred signature image, 'Load Image' (highlighted), 'Clear Image', 'Click', and 'Cancel' buttons.
- Signature Image Field:** A field in the 'Online Appointment System' section with a 'Signature Image' button (highlighted).

Add an electronic signature to a referral

It is recommended that the practice plans how to use electronic signatures and what templates should include them.

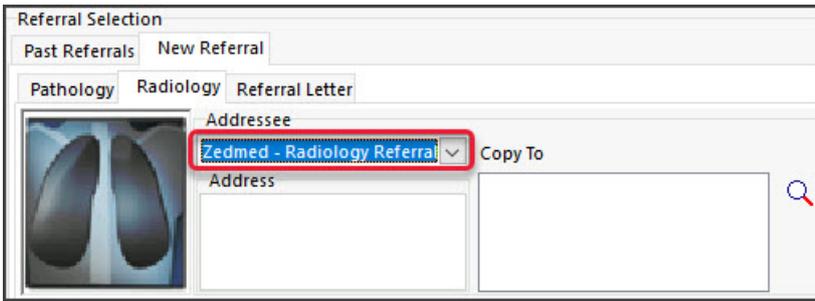

How to add a signature

To add a doctor's electronic signature to a template, insert the **Treating Doctor > Signature Image** merge field. How to do this is explained in the [Clinical template guide](#), and can be seen in the screenshot below.

Signatures for pathology and radiology referrals (ideal for telehealth)

Zedmed has created a Radiology and Pathology template to support **electronic signatures**, and the practitioner must have a signature file in their profile to use these templates. The practice should create a pathology addressee for the pathology template and a radiology addressee for the radiology template, and the practitioner should use these addresses when using Secure Send for a Pathology or Radiology referral. See the [Secure Send](#) guide for instructions on how to create addressees for the Pathology and Radiology signature templates.

Below is an example of an addressee the practice has created for Zedmed's electronic signature Radiology template.

Templates designed for printing on Radiology and Pathology paper do not include electronic signatures.

Signatures for referral letters

The practitioner's signature will be added to any letter containing the merge field: <Treating doctor: Signature Image>. The practitioner can delete the 'signature image' merge field if they want to print and manually sign.
