

Telehealth Cloud consult setup

Version: | Last Modified on 05/06/2026 9:45 am AEST

Due to the bandwidth required for Telehealth's video, Zedmed Cloud users open the Telehealth screen in a web browser on their local computer. To streamline this process, **Zedmed Companion** is used to monitor patients who have connected to Telehealth and to initiate Telehealth sessions in your web browser.

This guide explains how to set up access to Zedmed Companion. The steps are performed by the practitioner and repeated for each branch they require access to. For example, if a practitioner runs Telehealth consultations for bookings made at two clinics, the steps below will be performed for each clinic so the practitioner can switch between clinics in the app.

Requirements

- Zedmed 38.5 or later.
- **Telehealth** is enabled for the practice.
- **Single Sign-On** is enabled, so practitioners can log into Zedmed Companion.

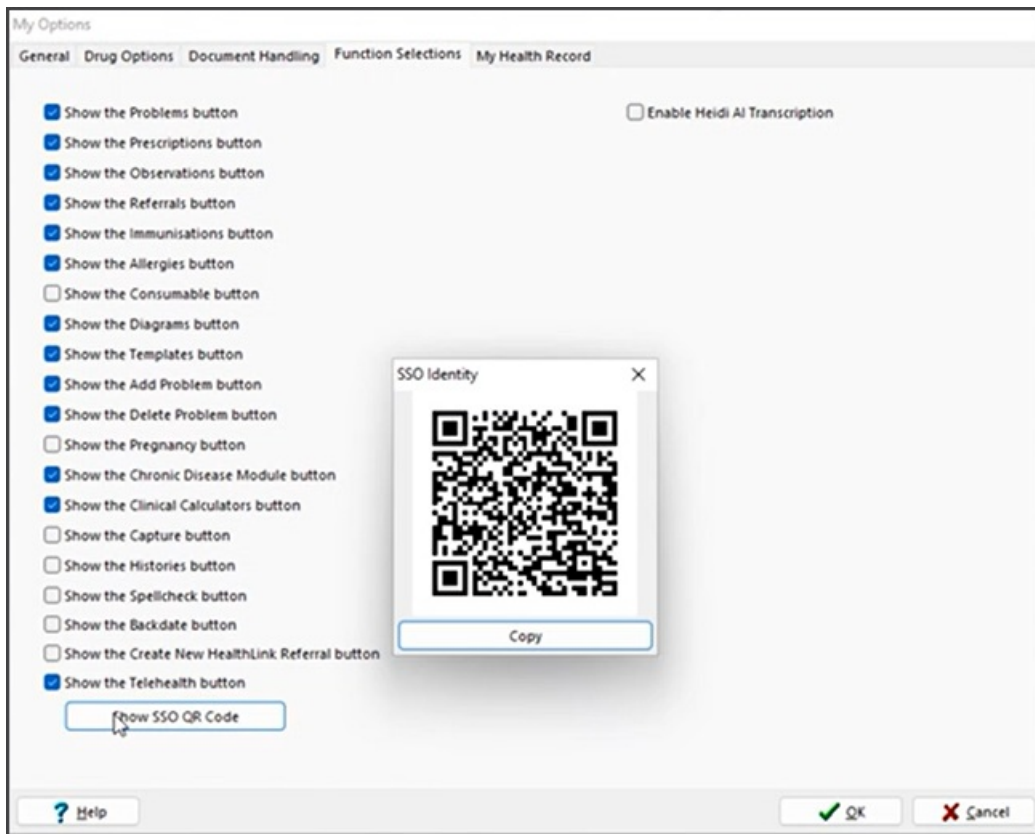

Set up Zedmed Companion

These steps add a clinic to the Zedmed Companion using a QR code from that clinic's Zedmed server.

To add a clinic:

1. In **Clinical**, select **My Options**.
2. Select the **Function Selections** tab.
3. Tick **Show the Telehealth button**.
4. Select **Show SSO QR Code**.

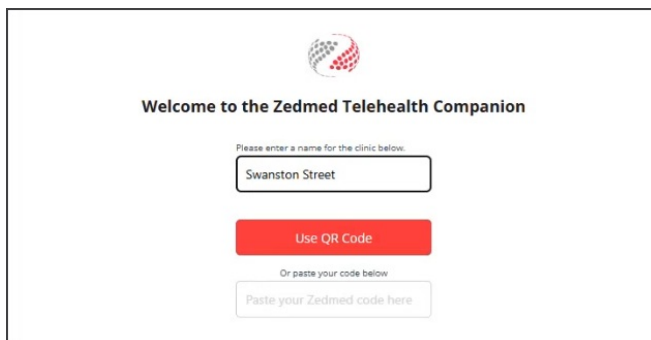

A QR code will display. The code is used to add this clinic to the practitioner's Zemed Mobile in [step 7](#).

5. Open Zedmed Companion using the URL: <https://companion.tele-health.systems/>
The first time the App opens, it will prompt you to enter a name for the clinic you are setting up.

6. Enter the clinic name.

If you're adding an additional clinic, select the top-right icon then **Add Clinic** in Zedmed Companion.

7. Enter the clinic's QR code to Zedmed Companion using either of these two options:

Option 1 - Paste the code (If Zedmed Companion and the QR code are on the same device).

a) Select **Copy** on the QR code in the Function Selection screen (see step 4).

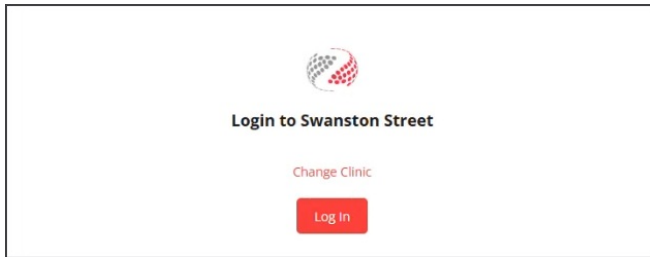

b) Paste the code into the field provided on Zedmed Companion and select **Go**.

Option 2 - Scan the code (If Zedmed Companion and the QR code are on different devices).

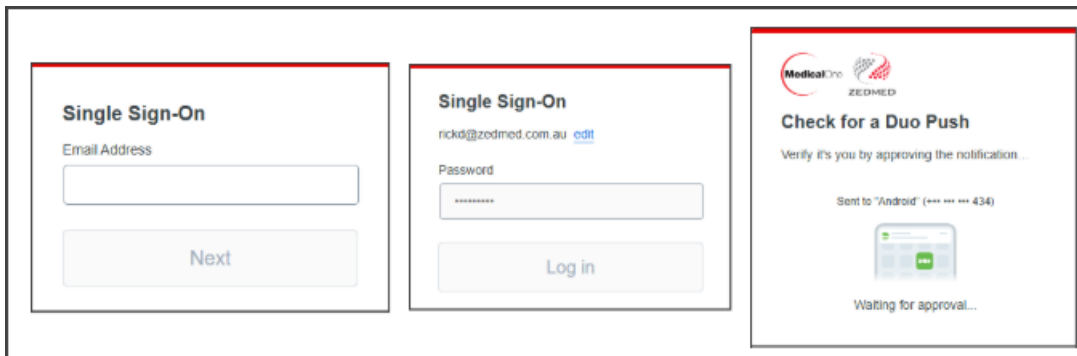

a) On the device, tap the **Use QR Code** button.

b) Use the device's camera to scan the **QR code** from the Function Selections screen. (see step 4).

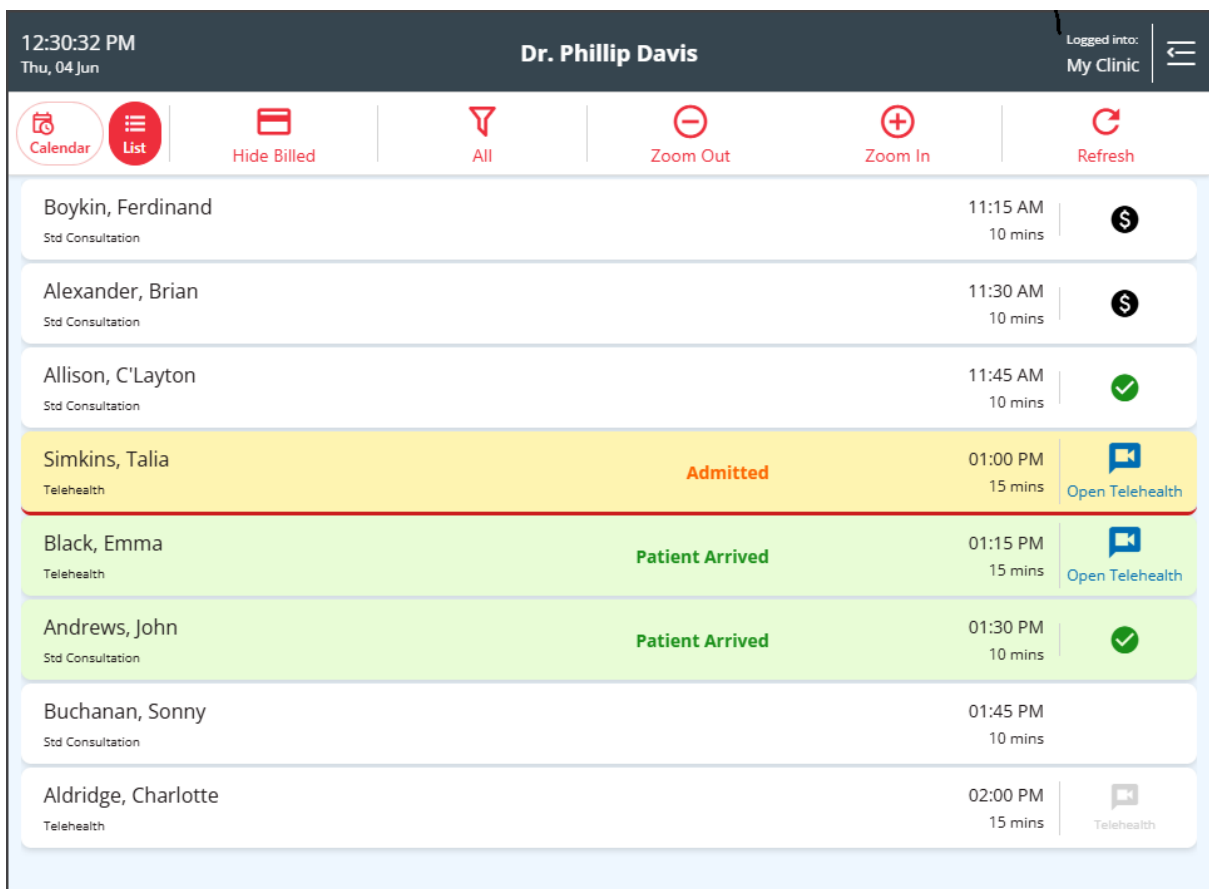

8. Select **Log In**.

9. Your mobile phone will prompt you to authenticate using SSO.

10. Zedmed Companion will open and display patients with bookings at the clinic.

11. Bookmark Zedmed Companion.

You can now initiate Telehealth consultations from the app. To learn more, see the [Telehealth user guide](#).

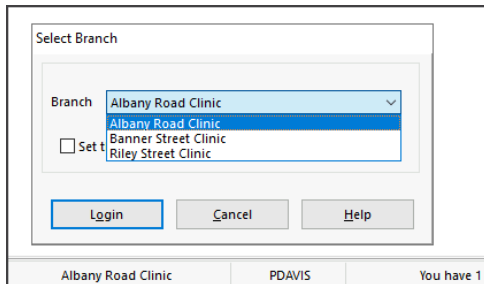

Adding additional clinics

If the practitioner conducts Telehealth sessions for appointments made at multiple clinics (with separate Zedmed databases), each clinic needs to be added to Zedmed Companion.

To add another clinic:

1. Close Clinical.
2. From Office, log in to the clinic (branch) to be added.

You can swap clinics in the Office using F3.

3. Reopen Clinical.
4. Repeat the steps in this guide for the new clinic.
5. For step 6, the new clinic name field is opened as follows:

- a) Log in to Zedmed Companion.
- b) Select the top-right icon.
- c) Select **Add Clinic**.
