

1 March 26 AIR requirements

Version: 1.00 | Last Modified on 05/12/2025 1:14 pm AEDT

From 1 March 2026, immunisation information transmitted to AIR must use Zedmed v38.8 or later, which includes the new **Antenatal** indicator checkbox in the **Immunisations screen**. Antenatal is no longer recorded as a vaccine type.

If the patient has an open pregnancy record and you add an immunisation, the Antenatal box will be ticked and transmitted to the AIR. The practitioner can also manually select it.

This is **required by Medicare** when transmitting a claim for an immunisation and applies to female patients aged 10 to 65 inclusive who are pregnant at the time of the immunisation.

The screenshot shows the 'Immunisation' form in Zedmed. The 'Antenatal' checkbox is highlighted with a red rectangle. The form includes fields for Doctor (Branch: Branch 1, Name: Augustus Eason), Immunisation Details (Brand/Vaccine, Date Given: 21/11/2025, Dose, Batch Number, Site), and checkboxes for 'Include non-AIR vaccinations', 'Store Batch No.', 'Antenatal', 'Route' (Intramuscular, Subcutaneous, Oral, Intradermal), and 'Vaccine Type' (NIP or Commonwealth, Other). A 'Comment' field is also present. The bottom of the form has buttons for 'Add Recall', 'OK', and 'Cancel'.
